

The webpage I chose is also an app; I chose Instagram. Below are the concepts learned in SDI:

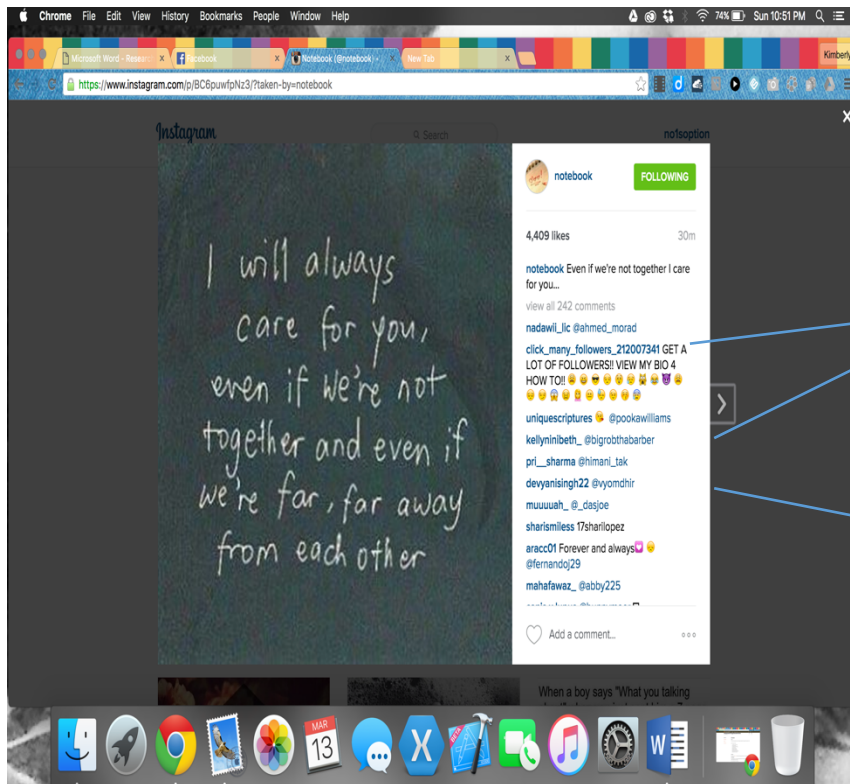

1. Variables and Data Types
2. Input and Output
3. Conditionals and Validation
4. Logic and Loops
5. Arrays and Array Lists
6. Methods and Functions
7. Arguments and Returns
8. String Properties and Methods
9. Classes and Constructors

The **argument** went into the **method** that went through the **strings** and the **return** is what allows you to see the post.

Variables and data types are what allows the posts to be saved and remembered on the site.

The **loop** is used to continue adding comments under a post.

An **array** – related data collected together.
